Hiltunen T.P., Nikkari T., Yla-Herttuala S.;
Submitted (MAR-1994) to the EMBL/GenBank/DDBJ databases.

-i-FUNCTION: Destroys radicals which are normally produced within the cells and which are toxic to biological systems.

-i- CATALYTIC ACTIVITY: 2 superoxide + 2 H(+) = O(2) + H(2)O(2).

-i- COPACTOR: Copper and zinc (By similarity).

-i- SUBUNIT: HOMOTETRAMER (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         P41975;

-!- FUNCTION: LYASE AND SODIUM TRANSPORTER.
-!- CATALYTIC ACTIVITY: Oxaloaceteate = pyruvate + CO(2).
-!- COFACTOR: REQUIRES A SODIUM ION.
-!- SUBBUNT: HETEROTHER OF AN ALPHA, A BETA AND A GAMMA SUBUNIT.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: BELONGS TO THE GCDB / MMDB / OADB FAMILY.

PEBS Lett. 266:37-40(1990).

-!- FUNCTION: UROTENSIN IS FOUND IN THE TELEOST CAUDAL NEUROSECRETORY
SYSTEM. IT HAS A SUGGESTED ROLE IN OSMOREGULATION AND AS A
CORTICOTROPIN-RELEASING FACTOR. THE NONHORMONAL PORTION OF THIS
PRECURSOR MAY BE A UROTENSIN BINDING PROTEIN, UROPHYSIN.

-!- SIMILARITY: BELONGS TO THE UROTENSIN 2 FAMILY.
                                                                                                                                                                                                                       MEDLINE=80144900; PubMed=231766;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      15-JUN-2002 (Rel. 41, Last Sequence update)
15-JUN-2002 (Rel. 41, Last annotation update)
Hypothetical 12.8 kDa protein in ycf9-trnS intergenic region (ORF111).
Obnothera hookeri (Hooker's evening primrose).
Terabe M., Kojima S., Taguchi S., Momose H., Miura K.-I.;
"Primary structure and inhibitory properties of a subtilisin-
chymotrypsin inhibitor from Streptomyces virginiae.";
Eur. J. Blochem. 226:627-632 (1994).
-!- FUNCTION: INHIBITOR OF SUBTILISIN AND CHYMOTRYPSIN.
-!- SUBUNIT: HOMODINER.
-!- SUBCELLULAR LOCATION: Secreted.
-!- SUBLIBERITY: BELONGS TO THE SERINE PROTEASE INHIBITORS SSI FAMILY.
